

cmput 670 competition report and specs

The tournament will be on the 6×6 board, 4s/move, 5 agents (1 from each of you, plus Kenny's example agent). We will play as many double rounds as time permits, or until the final ranking is clear. If there is a problem executing the tournament script, then games will be played by hand, i.e. with both players running their programs on their own machines, and announcing their moves to their opponents.

Your report should be from 2 to 4 pages long. Outline your algorithm, discuss whether it should defeat Kenny's player, and why, and discuss more generally your programs strengths and weaknesses.
